ABSTRACT

The invention refers to an absorbent article such as a sanitary napkin, an incontinence guard, a diaper, or a panty-liner, which article has a substantially elongated shape with a longitudinal direction and a transverse direction and exhibits two side edges (9, 10), a front edge (11) and a rear edge (12), a front portion (6) and a rear portion (7), and a central portion (8) situated between the front portion (6) and the rear portion (7) The article furthermore exhibits a liquid-pervious cover layer (2) and a liquid-impervious cover layer (3) and an absorbent body (4). The invention is characterized in that the rear portion (7) of the absorbent body (4) comprises a layer (17) that is split in a first leg (15) and a second leg (16) with a gap between the legs (15, 16), where an angle  $\alpha$  is defined between the first leg (15) and the second leg (16), which elastic member (19) essentially extends in the longitudinal direction.
